

nimue introduces:

specialised professional skin treatments microneedling and chemibrasion™

Two new professional skin treatment options to meet the demands of the modern consumer and to elevate nimue to the next level of derma cosmeceutical skin treatment

*"You are what your skin absorbs."
Prof. Aubrey Parsons.*

microneedling

What is nimue microneedling?

A professional facial treatment procedure performed by a skin treatment professional to achieve immediate and visible skin rejuvenation and renewal with long lasting effects.

A minimally invasive microneedle roller is utilised to stimulate collagen induction and serves as a trans dermal delivery device to increase penetration of active skin care ingredients captured in trans dermal solutions. The microneedle roller produces microscopic channels in the skin which releases growth factors that stimulate new collagen production, thereby reducing wrinkles and improving skin texture.

How many treatments are required and when are results most noticeable?

Microneedling on it's own will produce collagen synthesis in approximately six weeks and microneedling with trans dermal solutions will enhance remodelling of the skin with noticeable results sooner.

A minimum course of 6 microneedling treatments is required to obtain desirable results:

- 1st month – 1 treatment at weekly intervals [4x treatments]
- 2nd month – every 15 days [2x treatments]
- Maintenance – 1 treatment every 2 to 3 months [optional]

What results can be expected?

- Restoration of volume and plumpness of the skin
- Reduced pore size and improved skin texture
- Softening of fine lines and wrinkles and improvement in elasticity
- Improvement of superficial scars

TDS™

What is TDS™ trans dermal solutions?

Concentrated rejuvenating and anti ageing trans dermal solutions in ampoules for professional use in conjunction with nimue microneedling treatment or other transdermal release methods such as iontophoresis and ultrasound. Solutions are preservative free in sealed glass ampoules that contain 100% pure active components.

Which TDS™ solutions are available and what are the benefits on the skin?

Ascorbic acid

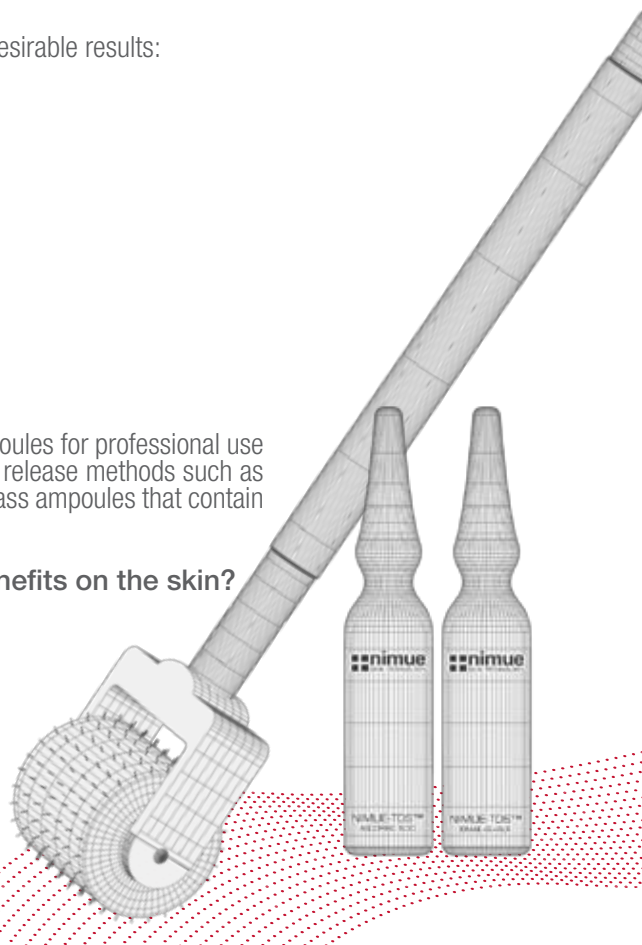

For rejuvenation of photo damaged skin

- Reduces the appearance of fine lines, wrinkles and sagging skin.
- Promotes a brighter skin and assists to reduce hyperpigmentation.
- Improves elasticity and creates a more youthful appearance.

DMAE, Silicium and Alpha Lipoic Acid

For firming of photo damaged and ageing skin

- Instant firming effect, creating a tensing effect in the skin.
- Diminishes and smooths wrinkles caused by sagging skin.

chemibrasion™

What is chemibrasion™?

An innovative non-invasive rejuvenating treatment mask peel concept that adds a new dimension to professional superficial peeling with the added benefits of rejuvenation and restoration without aggression or negative side effects.

Nimue's Chemibrasion™ is different to all other procedures in that it offers a safe and slow delivery of a unique and powerful blend of active ingredients that exfoliate and rejuvenate the skin in all skin classifications, resulting in alleviating the effects of time, sun damage and environmental assaults on the skin.

What are the benefits of the unique blend of active ingredients in chemibrasion™?

A chemical "peel" with a difference!

Presented in an active treatment cream mask based on a unique cosmeceutical formulation based on Retinol, Emblica, Ubiquinone, Mandelic acid, Kojic acid and Salicylic acid, thus delivering an innovative complex of ingredients gradually to the skin, culminating not just in a peeling result, but also an active skin rejuvenation treatment.

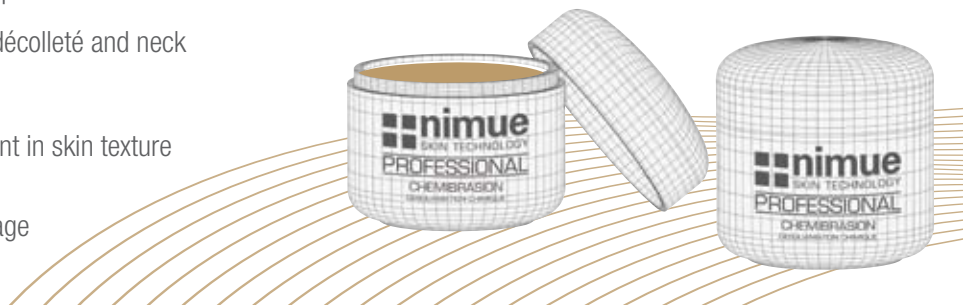

What indications are ideal for this treatment?

A unique factor is that Chemibrasion™ is ideal for most skin types, conditions and all phototypes.

- Environmentally and photo damaged skin
- Ageing skin
- Hyperpigmentation (including melasma and post inflammatory hyperpigmentation - PIH)
- Generally, all Fitzpatrick phototypes are suitable for treatment as Nimue Chemibrasion™ has a very low incidence of post inflammatory hyperpigmentation
- Oily skin, uneven texture and enlarged pores
- Dull and lifeless skin
- Photo damaged skin on hands, arms, décolleté and neck
- Mild acne scarring

What results can be expected?

- Refinement of the skin and improvement in skin texture
- Radiant appearance of the skin
- Firming of the skin
- Reduction of fine lines and photo damage
- Refinement and softening of the skin
- Improvement in hyperpigmentation

maintenance complex for home care support

a new addition to the booster range of home care products to actively support and enhance the microneedling and chemibrasion™ treatment results.

Based on a unique complex of Retinol, Emblica, Ubiquinone, Salicylic acid and a synergistic pigment inhibitor complex.

This active home care skin rejuvenation treatment is essential to ensure the best possible results as the formulation stimulates the physiological processes initiated by the professional treatment, and rapidly restores and protects the skin and assists in preventing post inflammatory hyperpigmentation, resulting in a more youthful appearance.
